
Computing time per outer fold, nested selection included (one CPU core): kriging 0.2–3.5 s · KED-sel 1–7 s · NN-GLS 27–43 s · GNN-K 53–97 s · GNN-K-L 187–418 s. Full design with all 7 neural candidates (GNN-sel): ≈ 13 h (Meuse), ≈ 26 h (Jura); KED-sel: minutes.
Evidence base: synthetic fields, Walker Lake, Jura, Meuse. The questions are qualitative; no thresholds are calibrated.
